The fund attempts to outperform the S&P 500 index.

Suitable For

The fund is suitable for investors seeking common stock investment for total investment return (consisting of price appreciation plus income) or as a core equity portfolio for those using several asset classes.

Risks

Stock prices fluctuate in response to general market and economic conditions and to the activities of individual companies. Price fluctuations can be dramatic in the short term but over the long term the average market value has historically increased.

Total Return is the % return of an initial investment made at the beginning of the period to the ending redeemable value assuming all dividends and distributions are reinvested. Remember, past performance is not predictive of future results.
